Opinions expressed are those of the authors or the persons quoted and not necessarily those of the Association. Subscription rates: $27 per year, $75 for three years, or $16 each for ten or more subscriptions mailed to the same addressee. In Canada, $33 per year, foreign $33 per year. Individual copies, $2.75 each.

Second class postage paid at Washington, D.C. and additional mailing offices. Subscription orders should be sent to P.O. Box 37236, Washington, D.C. 20013. Letters, manuscripts, change of address, and all other correspondence should be sent to Mortgage Banking 1125 15th Street, NW, Washington, D.C. 20005. Six to eight weeks are required for a change of address. Along with new address, send last magazine label.

MORTGAGE MARKET TRENDS

June 26, 1984

In late June 1984, the Commerce Department released its flash estimate for second quarter Gross National Product (GNP) growth. This estimate, which is based on source data for the first month of the quarter and projections for the remaining months, predicted inflation-adjusted GNP will rise at a 5.7 percent annual rate for the three months ending in June. Because these data are substantially incomplete, this statistic is likely to undergo further significant revision in the months ahead. Concurrent with the estimate of second quarter growth, the Commerce Department also published its third revision of first quarter GNP growth. According to this latest revision, first quarter real GNP growth advanced at a 9.7 percent annual rate. The original estimate of 7.2 percent, the first quarter flash estimate made in mid-March, was revised upward on three consecutive occasions to 8.3 percent, 8.8 percent, and now to 9.7 percent. In all probability, the second quarter estimate will also undergo revisions of this nature. Also likely are further data showing an overall decline in second quarter growth rates from the first quarter, resulting from higher credit costs associated with the constraints imposed by limitations in money growth and strong levels of real activity.

During the initial phase of an economic recovery there are usually abundant supplies of idle productive resources available. As the recovery progresses, however, these idle resources are utilized and result in higher levels of economic activity and overall rates of growth. The most commonly quoted statistic is the aforementioned real or inflation-adjusted rate of gross national product. A measure often ignored is the nominal or current-dollar rate of gross national product, or the actual measure of GNP before price changes. Especially important is the relationship of growth in the money supply to the rate of growth in nominal GNP. By altering money growth, the Federal Reserve Board (Fed) can play an integral role in the direction and magnitude of economic activity through the vehicle of market interest rates.

In the first quarter of 1984, nominal GNP grow at a seasonally adjusted annual rate of 13.9 percent. Interestingly enough, real GNP growth in the first quarter of 1984, 9.7 percent, was identical to the real rate of growth in the second quarter of 1983. The nominal growth rate in the second quarter of 1983 was also very close, at 13.3 percent, to the measure in the first quarter of 1984. Interest rates, however, have run-up by over 150 basis points during this time period. Examination of money supply growth helps put this rate increase in its proper perspective.

In the second quarter 1983, while nominal GNP grew at a 13.3 percent rate, money growth, as measured by the Fed concept of M1 (the total of demand deposits, currency, and coin held by the public), grew at an 11.6 percent rate. Final sales, also, were running at just under a 7 percent rate of growth, providing readily available supplies of cash for corporate re-investment. The net result was Treasury bill yields in the 8.2 to 8.6 percent range and Treasury bonds around 10.2 percent.

In comparison, the first quarter 1984 rate of nominal GNP growth was 13.9 percent, but M1 expanded by only 7.2 percent, leaving a potential "funding gap" of about 6.7 percent of GNP growth, compared with 1.7 percent in the second quarter 1983. Additionally, the growth in final sales had receded to a 3.9 percent annual rate, leaving many companies short of available investment capital. As a result, the competition for funds intensified. The impact on short-term rates was to drive them upward by around 130 basis points, with longer-term yields up more than 200 basis points.

Recent statistics seem to indicate that the Fed's cyclical alteration in money growth in the last six months has had the expected outcome. The rate of industrial capacity utilization in May 1984 was essentially flat when compared with April, and industrial production followed suit. High interest rates affected housing to such a degree in May that new housing starts declined by over 10 percent from April 1984. Additionally, the flash estimate of 5.7 percent for second quarter real GNP growth is around the 6 percent level that was generally expected though less than the 7.2 percent growth initially estimated for the first quarter of 1984.

In the aggregate, the economy is showing signs of cooling off from earlier levels. Generally, interest rates should not rise significantly and may even decline in the third quarter. Because M1 figures are approaching the top range of their target band, the Fed is unlikely to become more accommodating to the demand for money creation. However, with generally slower rates of economic growth on the horizon, and the twin concerns of the growing international and Federal debt, the probability of further restriction in the rate of money supply growth is very slight.

Gregory D. Luetscher

n.a.—Not available; p—Preliminary

[1]From the National Association of Realtors' "Existing Home Sales" series.

[2]Reflects cumulative total through the latest month for each column.

[3]Secondary market gross yields.

[4]Federal Home Loan Mortgage Corp. Existing construction only.

[5]Federal Reserve's weighted average interest rate for Commercial Banks.

[6]Weighted average gross yields for accepted bids.

[7]Survey of three New York security dealers. Securities for immediate delivery.

[8]Mutual Savings Banks and Commercial Banks.

[9]As of January 1984 this rate is for A-rated recently offered utility bonds.

Notes: [1]All dollar amounts are in millions.
[2]Total is seasonally adjusted separately from components. Total, therefore, may not equal sum of parts.
[3]Series labeled non-residential are also inclusive of farm data.
[4]Percent coverage equals outstanding commitments received from investors divided by the sum of outstanding end of month inventory and outstanding commitments issued to borrowers, all multiplied by 100.
